Mark-up: **H.R. 218 (Rep. Don Young) “King Cove Land Exchange Act”**
June 22, 2017 1324 Longworth HOB

H.R. 218 (Rep. Don Young) “King Cove Land Exchange Act”

Summary of the Bill

H.R. 218 (Rep. Don Young), introduced on January 3, 2017, authorizes a land exchange to facilitate the construction of a road linking the City of King Cove (a recognized Alaska Native Village) and the City of Cold Bay, the location of a modern airport. Under an equal value land exchange, up to 43,093 acres of non-federal lands owned by the State of Alaska could be transferred to the Department of the Interior (DOI) and added to the Izembek National Wildlife Refuge as designated Wilderness. In return, the State of Alaska will receive 206 acres of federal lands for the construction of an 11-mile, gravel, one-lane, non-commercial road segment that will connect existing roads on both sides of the refuge. The corridor would account for approximately 0.06 percent of the 315,000-acre Izembek National Wildlife Refuge. Currently, 131 acres of the proposed 206 acre project are designated as Wilderness.

The project route will follow second alternative and map outlined in the 2013 Izembek National Wildlife Refuge Land Exchange/Road Corridor Final Environmental Impact Statement. Further, H.R. 218 stipulates that the construction of the road shall not constitute a major federal action, and thus would waive an additional environmental impact review under the National Environmental Policy Act of 1969.

Background

History

The communities of King Cove and Cold Bay are located at the far west end of the Alaskan Peninsula, 625 miles southwest of Anchorage. King Cove is especially remote, linked to the outside world by a small gravel airstrip and a harbor. In the winter, harsh weather conditions and gale-force winds routinely ground planes and prohibit sea travel, preventing the community of nearly 1,000 from accessing hospitals and other emergency services. This has resulted in a number of fatal accidents over the years, with evacuation from the King Cove sometimes taking days due to the extreme weather. As a result, leaders of King Cove seek a public road to the larger, more modern airport twenty miles away in Cold Bay, which serves as the regional transportation hub and a site for medical evacuations to fully staffed hospitals outside the region. Important to this bill, Cold Bay originated as World War Two- era military base, and as a result

has a sizable network of roads and infrastructure surrounding the community, some of which currently exist on the surrounding Wilderness and Refuge areas¹.

Between the two communities lie both the Izembek National Wildlife Refuge and a section of the Alaska Peninsula National Wildlife Refuge, two small components of Alaska's nearly 59 million acres of designated wilderness. The Izembek National Wildlife Refuge was originally established as a Wildlife Range by an Alaska Public Land Order in 1960, and then was later converted to a Wildlife Refuge with the Alaska National Interest Lands Conservation Act (ANILCA) in 1980². Additionally, the Alaska Peninsula National Wildlife Refuge was also designated with ANILCA's passage. Both Refuges serve as important feeding grounds for migratory birds, with nearly the entire population of three separate species of geese returning to the Reserves each fall³.

King Cove community leaders have been seeking a road linking the two towns for nearly four decades⁴. Major legislative action began in the 105th Congress, with then Natural Resources Chairman Don Young introducing H.R. 2259, *The King Cove Health and Safety Act*, to facilitate a major land exchange between the State of Alaska and the Fish and Wildlife Service (FWS). Despite similar legislation passing the Senate on a 59-38 vote, no House action was taken due to opposition from the Clinton White House and pushback from environmental groups⁵. Ultimately, Congress provided \$37.5 million dollars in additional funding to the community of King Cove to fund the construction of a hovercraft terminal and local medical facility, as an alternative to constructing a road through the Wilderness area⁶. However, despite the additional funding, the hovercraft workaround only served to be a temporary fix, with services only operating between 2007 and 2010, and eventually ceasing due to extreme operating costs and the inability to handle rough weather conditions⁷. In the 110th Congress, Representative Young again introduced legislation, H.R. 2801, to facilitate a land swap between the State of Alaska and FWS. The bill was reported to the House floor, but again, no action was taken.

Headway was made in 2009, when Congress passed the *Omnibus Public Land Management Act* (P.L. 111-11), which authorized the Secretary of Interior to determine if building the proposed road would serve the public interest. Accordingly, FWS conducted an Environmental Impact Statement (EIS) and released the final EIS in February 2013. The Final

EIS outlined five alternatives: two road construction alternatives; one hovercraft improvement alternative; one harbor improvement alternative; and the preferred alternative, no action⁸. Following the release of the final EIS, then Secretary of the Interior Ken Salazar directed the incoming Secretary of the Interior Sally Jewell to hold an official meeting in King Cove prior to making a final decision on the EIS. As a result, Secretary Jewell visited King Cove in September 2013, but ultimately decided to reject the land swap and uphold the FWS's preferred no action alternative⁹. The King Cove Tribes, the City of King Cove Corporation, and the Aleutians East Borough sued DOI and Secretary Jewell as a result of the decision, but in 2015 the Alaska District Court ruled that neither DOI nor Secretary Jewell violated the National Environmental Policy Act (NEPA) or of the Omnibus Public Lands Management Act (OPLMA) in the decision-making process¹⁰.

Need for Legislation

Despite the funding for the hoverport and the medical facility, the fact remains that King Cove is physically isolated from the outside world in the event of severe weather. 55 emergency medevacs have been required since Secretary Jewell's visit in 2013, a number of which have required either costly Coast Guard involvement, extended patient waiting times, or both. For instance, in 2016, a King Cove woman in her 70's suffering from heart issues was medevac'd from King Cove to Cold Bay by the Coast Guard after high winds prevented an air ambulance from landing at King Cove. In the end, it took the woman over seven hours to reach a hospital in Anchorage. A road between King Cove and Cold Bay would go a long way from preventing similar situations from reoccurring, and would provide a potentially life-saving evacuation route for King Cove citizens in the event of an emergency¹¹.

Support for the Legislation

Administration Position

The Administration's position on H.R. 218 is unknown at this time.

Cost

A Congressional Budget Office cost estimate has not yet been completed for this bill.
